

Convert markdown to pdf using pandoc template

2024/12/09

1. Special Note

Because `typst 0.12` currently does not provide a function to obtain the operating system type, this template cannot pre-set the preferred font for the user. You need to check and set the font before execution. The details are described in the [Fonts] section in `userguide.pdf`.

The font settings are saved in the `globals` variable in each pandoc typst template.

2. Requirements and Installation

1. pandoc `3.5` Download and installation instructions, <https://pandoc.org/installing.html>
2. typst `0.12.0` Download and installation instructions, <https://github.com/typst/typst/releases/tag/v0.12.0>

First download **pandoc** and **typst**, and put them in the system environment variable `PATH` where they can be found.

- MacOS/Linux OS: You can use command line software tools such as `brew`, `apt`, `mise`, `asdf`, etc. to install.
- Windows OS: You can use command line software tools such as `scoop`, `Chocolatey`, etc. to install. Or after downloading, add the directories where the pandoc and typst executable programs are located to the system variable `PATH`.

3. how to run

Copy the [themes](#) directory to your markdown document directory and execute:

```
cp -r themes markdown/FILES/DIRECTORY
cd markdown/FILES/DIRECTORY
template="THIS/TEMPLATE/pandoc/pandoc/ANY_PANDOC_TEMPLATE.typst"
pandoc_args="markdown_mmd+emoji+strikeout+fancy_lists+task_lists+implicit_
```

```
figures+link_attributes+inline_notes+tex_math_single_backslash+simple_tables+
grid_tables+multiline_tables+table_captions+yaml_metadata_block-blank_before_
blockquote"
cat markdownfiles.md |
  pandoc --from $pandoc_args \
  -t pdf --pdf-engine typst --template="$template" \
  -o "OUTPUT.pdf"
```

Any typst template file in the `pandoc/pandoc` directory is distinguished by [page size](#), [dark/light background](#), and [code highlighting theme](#).

There is an example shell script in the package directory, see `pandoc/examples.sh`

When developing this template, I edited markdown based on the sublime text text editor and used the build system to execute the above commands. For more operation instructions and style design instructions for the template, see `userguide.pdf` [Integration with Sublime Text]
